EDUCATION

Master of Science in Information Systems

California State University, Long Beach - GPA: 4.0/4.0

May 2025

Long Beach, CA

Relevant Coursework: Machine Learning for Business, Responsible AI, Database Management Systems, Systems Analysis & Design

SKILLS

Languages: Python, SQL, PySpark, R

Tools & Tech: Microsoft Excel, Tableau, Power BI, Streamlit, DataBricks, Git, Azure, AWS, Airflow, Jupyter, VS Code

Analytics & Modeling: A/B Testing, Experimentation & KPI Design, Funnel Analysis, Churn Prediction, Statistical Modeling

Data Science & ML: Supervised Learning, Classification, Regression Analysis, Time Series Analysis, Forecasting, LLMs

WORK EXPERIENCE

Associate Engineer II – Data Science, Innovation

Sep 2022 – Jul 2023

Harman International

Bangalore, India

- Built a forecasting model (R) to optimize demand planning, cutting planning costs by 40%.
- Redesigned the Revenue Growth Management tool (Python, SQL, Azure) to integrate the Australia region, automating workflows and saving 6 analyst hours/week while reducing delivery errors by 30%.
- Streamlined PySpark data workflows on distributed clusters, reducing query time by 30%.
- Automated testing pipelines (PySpark) for analytics solutions like Market Structure Analysis & Hispanic Insights, reducing validation time by 50% and accelerating feature deployment.
- Designed a Python-based reporting tool, reducing reporting time from 2 hours to 30 minutes.
- Wrote clean, user-first documentation that halved onboarding questions for new devs and led mentorship initiatives for team members.

Associate Engineer I – Data Science, Delivery

Sep 2021 – Aug 2022

Harman International

Bangalore, India

- Processed 100M+ POS records (PySpark, SQL) to enable predictive modeling for retail analytics.
- Built regression and classification models (Python) with 15% improvement in forecast accuracy.
- Automated data ingestion from Unify platform (Python, API), tripling execution speed.
- Developed dashboards (Streamlit, Dash) for brand reversal analysis, ML outputs, and transaction trends, empowering stakeholders to monitor behavioral shifts and adjust product strategies in near real-time.

Product Analyst Intern

Feb 2021 – Jul 2021

Cognizant Technology Solutions

Hyderabad, India

- Converted stakeholder requirements into clear user stories for product dev team, reducing scope changes by 3–4 iterations per feature and speeding up delivery cycles.
- Designed SQL schemas that improved key query performance by 25%+
- Used Postman and internal logging to validate that 95%+ of endpoints responded under 500ms under test loads.
- Integrated backend APIs to improve frontend load time by 20-30%

PROJECTS

Air Quality Forecasting & Analytics

[GitHub](#)

- Built a Python pipeline to ingest and preprocess AQI data via OpenAQ API; engineered a Prophet model to forecast 90-day air quality trends.
- Deployed a real-time Streamlit dashboard for AQI visualization and model output monitoring, enabling rapid interpretation of forecast data.

A/B Testing Automation & ML Analysis

[GitHub](#)

- Built automated A/B test pipeline (Python, XGBoost) to analyze test results and predict conversions (96.8% accuracy)
- Integrated with PowerPoint for instant reporting; system dynamically adapts to new datasets.
